Project Name	Web Phishing Detection
Maximum Marks	2 Marks

Problem Statement:

Phishing sites are malicious websites that imitate legitimate websites or web pages and aim to steal user's personal credentials like user id, password, and financial information. Spotting these phishing websites is typically a challenging task because phishing is mainly a semantics-based attack, that mainly focuses on human vulnerabilities, not the network or software vulnerabilities.

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A user on the internet.	Browse through websites.	The internet is not fully safe.	There are malicious websites.	Exposed and vulnerable to data theft.

PS-2	an Online shopper.	buy some products from an e-commerce website.	It's unsafe to use sensitive data such as my card number, PIN and so on in these websites.	The websites might phish our data and use it for unethical purposes.	scared to use the internet and buy products through it.
